It can be obtd. by expression of an isolated cDNA clone (see AAT1330) in bacterial or other host cells. Expansin proteins have also been identified in oat coleoptiles, in Arabidopsis (see AAR94530-32) and in rice (AAR94528-29), and appear to be broadly distributed throughout the plant kingdom. Expansins can be used e.g. in the mfr., de-inking and recycling of paper, in the textile industry, to aid delignification processes, to alter gel mechanical strength, etc.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes a novel vector (A) comprising (i) nucleic acid (I) encoding an expansin (II) and (ii) coupled sequences that allow expression of (I) in microorganisms. The recombinant expansins described in the invention are used in preparation, treatment and finishing of cellulose-based textiles (e.g. cotton) or in recycling of paper or for preparation of pulp from plant tissue, as a substitute for corrosive chemicals currently used in papermaking. Recombinant methods make possible large scale production of extensins possible. This sequence represents the Cucumis sativus (cucumber) S1 extensin homologue fragment

The recombinant expansins described in the invention are used in preparation, treatment and finishing of cellulose-based textiles (e.g. cotton) or in recycling of paper or for preparation of pulp from plant tissue, as a substitute for corrosive chemicals currently used in papermaking. Recombinant methods make possible large scale production of extensins possible. This sequence represents the Cucumis sativus (cucumber) extensin, csexpla, fragment
                    Novel swollenin protein isolated from applications in cleaning textiles (lau compositions), modifying textiles (departing textiles)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cc cellulclytic activity i.e., catalytic activity involving the breakage of condividual cellulose strands into smaller monomer (glucose) or oligomers (polysaccharides). Swollenin and its coding sequence are useful in certably contents of altering the properties of cellulosic substrate. Preferably ct methods for altering the properties of cellulosic substrate. Preferably ct methods are useful for altering the nutritional properties of animal cellulosic substrates of animal substrates, altering properties of cellulosic biomass during the reduction to glucose. The swollenin coding sequence has utility in cellulosic corn husk fibre during its reduction to glucose. The swollenin coding sequence has utility in cellulase is currently used, for example, company applications for which cellulase is currently used, for example, company applications for which cellulase is currently used, for example, compositions, and compositions, and consensus sequence is expressed by a fungus, it can be produced in large cuantities. The present sequence is a consensus sequence for plant composition, which was used in a sequence alignment with a partial swollenin composition sequence. It was found that there was a 21.7% identity between
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
